

TOP SHEET

BG was #1A1B26FF

In general: caps in series here are for higher voltage ratings.
Caps in parallel are to consolidate how many capacitor types I use.
Resistors in series as well are for consolidation.

CIPO is MISO
COPI is MOSI
just thought id try them out

drv8844 is rated for 65 volts
I want to choose parts that are rated for similar or higher
Ill probably never run it close to that high though

RIBBON CABLE INTERFACE FOR SNAP OFF BOARD

the analog RTD traces are running close to pretty high speed spi.
There is 2.5khz RC filter on the ADC though
